Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

The IRS limits how much more money you can put in. Per the IRS, at a certain point it's no longer a life insurance policy, but an investment called a Modified Endowment Contract (MEC), and it loses the tax benefits accorded to life insurance policies. Ideally, you fund the policy right up to the MEC line to decrease the amount of time it takes until your policy has significant cash value.

The distribution of wealth is a comparison of the wealth of various members or groups in a society. It shows one aspect of economic inequality or economic heterogeneity. The distribution of wealth differs from the income distribution in that it looks at the economic distribution of ownership of the assets in a society, rather than the current income of members of that society.
