Systems theory is the interdisciplinary study of systems. A system is a cohesive conglomeration of interrelated and interdependent parts that is either natural or man-made. Every system is delineated by its spatial and temporal boundaries, surrounded and influenced by its environment, described by its structure and purpose or nature and expressed in its functioning.

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

As far as probabilistic forecasting is concerned, the topic was not present in the EPF literature until Zhang et al. published two conference papers in 2002 (not visible in Fig. 2) and the first probabilistic EPF article in 2003 in IEEE Transactions on Power Systems, see the narrow white bars in the right panel of Fig. 2. Between 2005 and 2009 further eight articles were published, including ...

The tutorial on delimited continuations was given together with Kenichi Asai (Ochanomizu University, Japan) in the evening before the Continuation Workshop 2011. The concept of continuations arises naturally in programming: a conditional branch selects a continuation from the two possible futures ...
