The V8 with a crossplane crankshaft (see below) is a common configuration for large automobile engines. V8 engines are rarely less than 3.0 L (183 cu in) in displacement and in automobile use have exceeded 8.2 L (500 cu in) in production vehicles, such as the early 1970s Cadillac Eldorado. In some applications, e.g. industrial and marine V8 engines, displacement can be even larger.
