Essentials of Digital Signal Processing [B. P. Lathi, Roger A. Green] on Amazon.com. *FREE* shipping on qualifying offers. This textbook offers a fresh approach to digital signal processing (DSP) that combines heuristic reasoning and physical appreciation with sound mathematical methods to illuminate DSP concepts and practices. It uses metaphors

Skin effect is the tendency of an alternating electric current (AC) to become distributed within a conductor such that the current density is largest near the surface of the conductor, and decreases with greater depths in the conductor. The electric current flows mainly at the "skin" of the conductor, between the outer surface and a level called the skin depth.

In physics, the Poynting vector represents the directional energy flux (the energy transfer per unit area per unit time) of an electromagnetic field. The SI unit of the Poynting vector is the watt per square metre (W/m²). It is named after its discoverer John Henry Poynting who first derived it in 1884.: 132 Oliver Heaviside also discovered it independently.

Electrical resistance) is the ratio of voltage to current. The SI unit of electrical resistance is the ohm (Ω). The resistance of a conductor depends on its material, length, and cross-sectional area. The resistance of a conductor is directly proportional to its length and inversely proportional to its cross-sectional area. The resistance of a conductor is also dependent on its temperature. The resistance of a conductor increases with temperature.

The concept of electric field was introduced by Michael Faraday. An electric field is created by a charged body in the space around it, and it exerts a force on other charged bodies in the space.

El concepto de campo el3ctrico fue introducido por Michael Faraday. Un campo el3ctrico se crea por un cuerpo cargado en el espacio que lo rodea, y produce una fuerza que ejerce sobre otras cargas ubicadas en

el campo.
