Encephalization quotient (EQ), encephalization level or just encephalization is a relative brain size measure that is defined as the ratio between observed to predicted brain mass for an animal of a given size, based on nonlinear regression on a range of reference species.. It has been used as a proxy for intelligence and thus as a possible way of comparing the intelligences of different species.

### **Encephalization Quotient (EQ) - Wikipedia**

Emotional intelligence (EI), Emotional leadership (EL), Emotional quotient (EQ) and Emotional Intelligence Quotient (EIQ), is the capability of individuals to recognize their own emotions and those of others, discern between different feelings and label them appropriately, use emotional information to guide thinking and behavior, and manage and/or adjust emotions to adapt to environments or ...

mass. Here we call Eq. (3.3) the angular-momentum relation. Note that it is also a vector equation implying three scalar equations such as  $M \times dH/dt$ . For an arbitrary mass and arbitrary moment,  $H$  is quite complicated and contains nine terms (see, e.g., Ref. 1, p. 285).

$s_{\omega}^{-1}$  must vanish for negative  $t$ ; from which the Fourier relation Eq. (4) becomes  $s_{\omega}^{-1} = \frac{1}{2\pi} \int_{-\infty}^{\infty} R(\omega) e^{i\omega t} d\omega$ . Now let us regard  $s_{\omega}^{-1}$  as a function of a complex  $\omega$ : When  $\text{Im} \omega > 0$  (that is, in the upper half  $\omega$ -plane) the integral converges abso-

Ideal MOS |A. at zero applied bias, the energy difference between the metal work function  $\phi_m$  and the semiconductor work function  $\phi_s$  is zero (in other words, the energy band is flat called flat band condition ) |B. the only charges that exit in the diode under any biasing condition are those in the semiconductor and those with equal but opposite sign on the metal surface

where the real part,  $\epsilon'$ , known as the dielectric constant, expresses the ability of the material to store energy, while the imaginary part,  $\epsilon''$ , known as the dielectric loss factor, is a measure of the energy absorbed from the applied field. The dielectric properties of the material depend on the physical properties of the material, especially its water content.
