In mathematical analysis, many generalizations of Fourier series have proved to be useful. They are all special cases of decompositions over an orthonormal basis of an inner product space. Here we consider that of square-integrable functions defined on an interval of the real line, which is important, among others, for interpolation theory.

### Generalized Fourier series - Wikipedia

Definition. The Fourier series of a function  $f(x)$  with a domain of  $[0, b]$  is the notation of that function as a linear combination of many orthogonal versions of the same Bessel function of the first kind  $J_{\nu}$ , where the argument to each version  $n$  is differently scaled, according to  $J_{\nu}(c_n x)$  where  $c_n$  is a root, numbered  $n$  associated with the Bessel function  $J_{\nu}$  and  $c_n$  are ...

Then, the coefficients  $a_k$  for  $k = 0$  to  $\infty$  and  $b_k$  for  $k = 1$  to  $\infty$  (we define  $b_0$  to be 0) are referred to as the Fourier coefficients of  $v$ . The waveform  $v$  can be represented with its Fourier coefficients, but the sequence of

Let's begin by evaluating the Fourier series for the functions:  $f(x) = 1$  for  $0 < x < L/2$ , but 0 for  $L/2 < x < L$  and  $g(x) = x$ ,  $0 < x < L$ . The functions have not been defined at the points of discontinuity, but as we know, the Fourier series will converge there to the average of the limit from the left and the limit from the right.

Section 8-7 : Convergence of Fourier Series. Over the last few sections we've spent a fair amount of time to computing Fourier series, but we've avoided discussing the topic of convergence of the series.

A time series is defined as a collection of observations made sequentially in time. This means that there must be equal intervals of time in between observations.

In this section we will formally define an infinite series. We will also give many of the basic facts, properties and ways we can use to manipulate a series. We will also briefly discuss how to determine if an infinite series will converge or diverge (a more in depth discussion of this topic will occur in the next section).

Ce résultat semble être l'un des tout premiers théorèmes connus de l'humanité. On en trouve probablement des traces – une période datant d'avant l'écriture [3]. La première démonstration connue provient d'Euclide qui vivait autour de 300 av. J.-C. ; elle est rédigée dans un texte nommé les Éléments. La réciproque est aussi vraie.
