

**frost like night pdf**

White frost. White frost is a solid deposition of ice that forms directly from water vapour contained in air.. White frost forms when there is a relative humidity above 90% and a temperature below  $0^{\circ}\text{C}$  ( $32^{\circ}\text{F}$ ) and it grows against the wind direction, since air arriving from windward has a higher humidity than leeward air, but the wind must not be strong or it damages the delicate icy ...

Frost weathering, also called ice wedging or cryofracturing, is the collective name for several processes where ice is present. These processes include frost shattering, frost-wedging and freeze-thaw weathering. Severe frost shattering produces huge piles of rock fragments called scree which may be located at the foot of mountain areas or along slopes.
