The cosmological particle production that occurs in early universe models, because of the changing space-time metric, could be a relevant source for entropy generation. In this respect, work has been done introducing an entropy measure that increases as the quantum field that represents these particles evolves.

A. The cosmological principle On the largest scales, the universe is assumed to be uniform. This idea is called the cosmological principle. There are two aspects of the cosmological principle: the universe is homogeneous. There is no preferred observing position in the universe. the universe is isotropic. The universe looks the same in every direction.
