USGS.gov | Science for a changing world

Geology describes the structure of the Earth on and beneath its surface, and the processes that have shaped that structure. It also provides tools to determine the relative and absolute ages of rocks found in a given location, and also to describe the histories of those rocks. [citation needed] By combining these tools, geologists are able to chronicle the geological history of the Earth as a ...

The geology of the Himalaya is a record of the most dramatic and visible creations of modern plate tectonic forces. The Himalayas, which stretch over 2400 km between the Namche Barwa syntaxis in Tibet and the Nanga Parbat syntaxis in India, are the result of an ongoing orogeny â€” the result of a collision between two continental tectonic plates. This immense mountain range was formed by ...

A group of geologists have drawn my attention to the 2010/2013 Geological Society of London's statement on climate change and asked if I could arrange an on-line discussion about it. The lead author of the statements is Dr Colin Summerhayes who has participated as guest blogger and commenter on Energy Matters before. And so I asked if I could reproduce the statements on these pages and ...
