

geometric properties for parabolic pdf

geometric properties of solutions of the Gelfand's problems by using the parabolic method which is introduced by Lee and Vázquez, [LV]. Recently, there has been a lot of studies of the problem (GP) because of its wide applications.

Table gives the geometric properties for the cases of rectangular, trapezoidal, triangular, circular, parabolic channels. In addition the details of Round bottomed triangular and round bottom rectangular are also given.

2. CHANNELS AND THEIR GEOMETRIC PROPERTIES

More recently, once basic issues about PDE's, such as existence, uniqueness and stability of solutions, have been understood quite well, research on topological and/or geometric properties of their solutions has become more intense.

Geometric Properties for Parabolic and Elliptic PDE's

This book collects recent research papers by respected specialists in the field. It presents advances in the field of geometric properties for parabolic and elliptic partial differential equations, an area that has always attracted great attention.

Geometric Properties for Parabolic and Elliptic PDE's

The study of these issues is attracting the interest of an increasing number of researchers and is now a broad and well-established research area, with contributions that often come from experts from disparate areas of mathematics, such as differential and convex geometry, functional analysis, calculus of variations, mathematical physics, to name a few.

ward self-similar solutions in parabolic problems. All papers were double-refereed according the high standards of this journal. The Italian and Japanese mathematical school have a long history of research in PDE's and count many research groups which are active and steadily collaborate in the study of geometric properties of their solutions.

The reflective and refractive properties have many advantages and frequently used in physics. Similarly, its geometrical properties are widely used in engineering and many other areas. Some new properties of the parabola have been developed now and defined in this article with necessary analytic geometric equations and illustrated with an example.

ON PARABOLA SOME NEW GEOMETRICAL PROPERTIES

This property is of course the basis of many applications (headlights, flashlights, satellite dishes, radar...) For example, here is a diagram of how this works in a reflector telescope: The primary mirror is parabolic, reflecting the parallel rays to the focus.
