Weakly Hard Real-Time Systems $\hat{\epsilon}$ Systems where m out of k deadlines have to be met. $\hat{\epsilon}$ In most cases feedback control systems, in which the control becomes unstable with too many missed control cycles. $\hat{\epsilon}$ Best suited if system has to deal with other failures as well (e.g. Electro Magnetic Interference EMI).

Hard Real-Time Computing Systems - Predictable Scheduling

Hard real time systems uses preemptive version of priority scheduling, so that critical tasks get immediately scheduled, whereas soft real time systems uses non-preemptive version of the priority scheduling, which allows the present task to be finished before control is transferred to the higher priority task, causing additional delays.
