In this section we will introduce logarithm functions. We give the basic properties and graphs of logarithm functions. In addition, we discuss how to evaluate some basic logarithms including the use of the change of base formula. We will also discuss the common logarithm,  $\log(x)$ , and the natural logarithm,  $\ln(x)$ .

Introduction. A probability space is a mathematical triplet  $(\Omega, \mathcal{F}, P)$  that presents a model for a particular class of real-world situations. As with other models, its author ultimately defines which elements  $\omega \in \Omega$ , and will contain. The sample space is the set of all possible outcomes. An outcome is the result of a single execution of the model. Outcomes may be states of nature, possibilities ...

In mathematics, the quaternions are a number system that extends the complex numbers. They were first described by Irish mathematician William Rowan Hamilton in 1843 and applied to mechanics in three-dimensional space. A feature of quaternions is that multiplication of two quaternions is noncommutative. Hamilton defined a quaternion as the quotient of two directed lines in a three-dimensional ...

I need an equivalent of the Unix head command (display the first N lines of the output). This is what I'm using currently: `tasklist | find /N " " | findstr /r [[0-9]]` The above code displays the first 10 lines of tasklist's output. `find /N " "` prepends a line number to the start of each line while `findstr /r [[0-9]]` extracts the first 10 lines using regex.

Quaternion. The quaternions are members of a noncommutative division algebra first invented by William Rowan Hamilton. The idea for quaternions occurred to him while he was walking along the Royal Canal on his way to a meeting of the Irish Academy, and Hamilton was so pleased with his discovery that he scratched the fundamental formula of quaternion algebra,
