Why Alternative Hydraulics? The practice of research in hydraulics seems to be very conservative. What is already accepted will be accepted, while any original thought is under-valued.

Pipe flow, a branch of hydraulics and fluid mechanics, is a type of liquid flow within a closed conduit (conduit in the sense of a means of containment). The other type of flow within a conduit is open channel flow. These two types of flow are similar in many ways, but differ in one important aspect. Pipe flow does not have a free surface which is found in open-channel flow.

Using Eq. , the optimal canal cross section for minimum water loss for a specified value of m , can be obtained. Once, the value of b and y are calculated, 4.2. Velocity-constraint. The minimum permissible velocity, V_{min} or the non-silting velocity is the lowest velocity that will not initiate sedimentation and will not induce the growth of vegetation. . Assessing the impacts of climatic and land use changes on rates of soil erosion by water is the objective of many national and international research projects (e.g. Favis-Mortlock and Boardman, 1995, Williams et al., 1996, Poesen et al., 1996a, Van Oost et al., 2000, Nearing, 2001). However, over the last decades, most research dealing with soil erosion by water has mainly focussed on sheet ...

cualquier sección de un canal medida con respecto al fondo del mismo. [1] La energía específica de una sección de un canal puede ser expresada como:
$$E = \frac{v^2}{2g} + z + y$$

La hidráulica es la rama de la física que estudia el comportamiento de los líquidos en función de sus propiedades específicas. Es decir, estudia las propiedades mecánicas de los líquidos dependiendo de las fuerzas a las que son sometidos. Todo esto depende de las fuerzas que se interponen con la masa y a las condiciones a las que está sometido el fluido, relacionadas con la viscosidad ...
