

plant and animal cells pdf

The second major difference between plant and animal cells is the cell wall. While both plant and animal cells have a cell membrane, only plants have a cell wall. This is what provides plant cells with a protective covering and gives the plant the rigidity it needs to remain erect.

Chloroplast. Plant Cells:

Plant cells are composed of chloroplast to produce their own food. Hence, plant cells are autotrophs. Animal Cells:

Animal cells do not contain chloroplast. Hence, animal cells are heterotrophs.

(PDF) Difference Between Plant and Animal Cells

The similarities between plant and animal cells are that they are both eukaryotic cells (cells that contain a nucleus). They share many kinds of cell parts (or organelles) such as the nucleus, mitochondria, endoplasmic reticulum, golgi apparatus, lysosomes, cytosol and cell membrane. Coral polyps are living animals.

Plant Cells. shape - most plant cells are squarish or rectangular in shape. amyloplast (starch storage organelle)- an organelle in some plant cells that stores starch. Amyloplasts. are found in starchy plants like tubers and fruits. cell membrane - the thin layer of protein and fat that surrounds the cell, but is inside the cell wall.

basic cell structures, and describe their functions in both plant and animal cells. Guiding Questions 1. Can students explain why cells are called life's building blocks? 2. Can students describe the cell as a three-dimensional object? 3. Can students compare and contrast a plant cell and an animal cell? 4.

NEL 4.5 Plant and Animal Cells 105 Nucleus The nucleus is known as the control centre of the cell because it regulates all cellular activities. In both plant and animal cells, the nucleus is surrounded by a membrane called the nuclear membrane.

07-08 Plant and Animal Cell Diagram and Coloring Worksheet)

Plant cell walls are of two types: a). Primary (cellulose) cell wall - While a plant cell is being formed, a middle lamella made of pectin, is formed and the cellulose cell wall develops between the middle lamella and the cell membrane. As the cell expands in length, more cellulose is added, enlarging the cell wall.

1) The cell is the unit of structure, physiology, and organization in living things. 2) The cell retains a dual existence as a distinct entity and a building block in the construction of organisms. 3) Cells form by free-cell fonuation, similar to the formation of crystals (spontaneous generation).
